Copper Plumbing Wallcharts for College Workshops and Classrooms

Responding to demand from plumbing lecturers, the UK Copper Board has produced a new copper plumbing wallchart detailing essential information on copper tube and fittings, specially designed to meet the needs of modern plumbing students.

The wallchart comes in the form of two A1-sized posters. The first describes copper tube sizes and copper and copper alloy fitting types, as well as providing a comprehensive step-by-step guide to completing a capillary soldered joint. The second features the information and steps required to carry out plumbing pipework sizing.

The wallchart is aimed specifically at colleges teaching City and Guilds plumbing courses, and copies can be obtained by contacting the UK Copper Board at copperboard@copperdev.co.uk.

A webcast on pipe sizing is also available on the UK Copper Board website. This fully narrated PowerPoint presentation takes the viewer through the step-by-step calculations required to correctly size pipe for a plumbing installation. The webcast can be viewed online, or downloaded for viewing at home or in the classroom. For the full selection of webcasts, simply go to the UK Copper Board website (www.ukcopperboard.co.uk) and select 'Webcasts'.

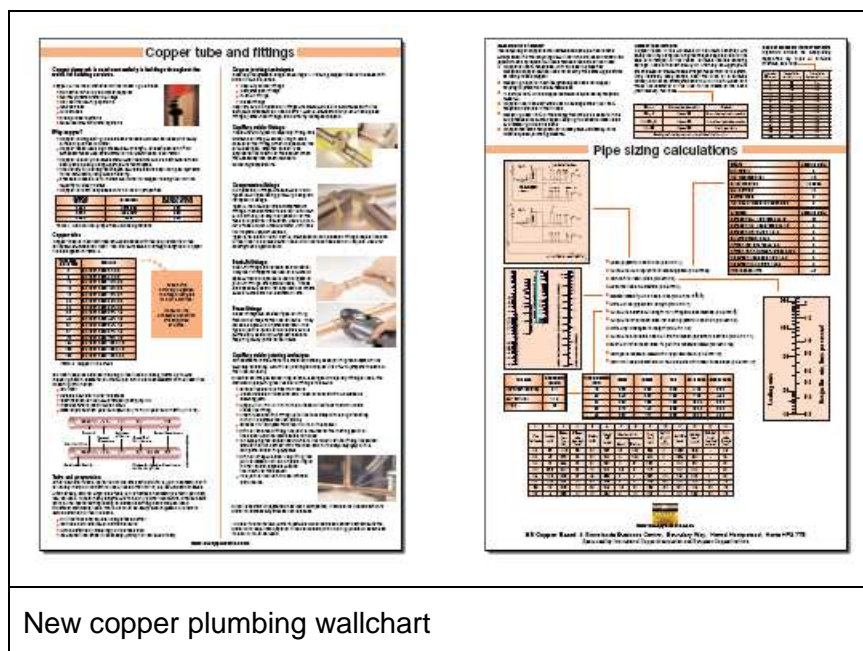

The new resources have been extremely well received, with plumbing lecturers expressing their appreciation of the webcasts and many already requesting extra copies of the wallchart.

Ends

Notes to the editor:

The UK Copper Board was established in 1993 as part of a European campaign to promote the use of copper as the professional's choice when installing plumbing and heating systems.

The Board works in close association with tube and fitting manufacturers throughout the UK and Europe, and is supported by the International Copper Association and the European Copper Institute.
